SAN BERNARDINO CALIFORNIA.

PRINTED FOR THE AUTHOR.

1907.

Copyright, 1905, by W. G. Wright.

ADVERTISEMENT.

Colored Plates of West Coast Butterflies.

These Colored Plates here following are **Sample Copies** of the plates which form the illustrations of **"The Butterflies of the West Coast,"** an exhaustive work by this same author, and these plates in sets are now offered as an abridgement of that book, as an advertisement of it, as the best possible substitute for the more costly book, and as a **First Book,** to interest students, and to lead them into the pleasant paths of the fascinating pursuit of butterfly knowledge.

These Plates are **actual photographs** of the real butterflies themselves, and are true in size, in form, and in color; and by these figures you will be enabled to identify the name and sex of most of the butterflies to be found anywhere on the entire West Coast of the United States.

By these Plates the student can gain a good general insight into the science of western butterflies, and then if he wishes to enter more fully into the charming study he can learn from the above-named book all that is now known about them anywhere.

The book named and these Plates form the **first and only works** ever published on Coast butterflies: the text of the book is full and complete, and it describes **every known butterfly** on the West Coast. It is most beautifully printed and bound in red buckram in the best modern style. The book and these plates are not an evanescent or temporary work; they are **for all time;** they can never become out of date, nor can they ever be set aside by any later publication.

The book **"The Butterflies of the West Coast,"** and this present **Book of Plates** are not kept on sale by any dealer, as the larger part of the books were burned in the great San Francisco fire, but can be obtained only from the Author,

W. G. Wright,
445 F Street,
San Bernardino, California.

PLATE I

PARNASSIUS

1, Clodius.
2, Clarius.
3, Altaurus.
4, Menetriesi.
5, Baldur.
